SUMMARY

Cloud Architect and **DevOps Engineer** with 6+ years of hands-on experience building, automating, securing and operating infrastructure across **AWS, Kubernetes and VMware/private-cloud environments**.

Strong in **Terraform** Infrastructure as Code, **Linux**, **CI/CD**, observability, **networking** and client-facing delivery.

Combines **architecture design with practical implementation**: reusable modules, reliable deployment pipelines, operational runbooks, **cost optimization** and **clear documentation for technical and non-technical stakeholders**.

CORE SKILLS

Cloud	AWS (Lambda, Lambda@Edge, CloudFront, EC2, S3, RDS, DynamoDB, VPC, IAM, SSO / Identity Center, Route53, ACM, EventBridge, SQS, KMS, Secrets Manager, Organizations, Health API), GCP
Containers & K8s	Kubernetes, Helm, k3s, Kind, Minikube, EKS, Docker, Gunicorn, Ingress, Gateway API, HPA, NetworkPolicies, RBAC, PVCs, ConfigMaps, Secrets
IaC & Config	Terraform (custom reusable modules), HCL, Bash, YAML, Helm charts
CI/CD	GitHub Actions, GitLab CI, CircleCI, Jenkins, JFrog Artifactory, DevSecOps pipelines
Observability	Prometheus, Grafana, PromQL, am-executor, structured logging, health/readiness probes, custom Unix port-based monitoring
Virtualization & Networking	VMware vSphere / ESXi, VLANs, firewall routing, segmented zones, Nginx, Traefik, TCP/IP, HTTP/S, DNS, TLS
Security	IAM policies & roles, Keycloak SSO, RBAC, honeypot auth, NetworkPolicies, encryption at rest/in transit, vulnerability assessments, audit logging
Languages	Python (Flask, Pandas), Bash, Java, Go, JavaScript, SQL
Databases	PostgreSQL, MySQL, MariaDB, SQLite, DynamoDB (GSI design), Amazon RDS
OS & Tooling	Linux (admin, server), Windows, Git, GitHub, Postman, draw.io, Agile

SELECTED PUBLICATIONS

Hands-on public repositories that demonstrate my skills above. Full overview: github.com/GiliFaibish1999

Flagship - Full On-Prem DevOps Stack

- [vmware-on-prem-network](#) — Full VMware vSphere/ESXi lab built with custom Terraform modules: segmented VLANs, firewall routing, Kubernetes, PostgreSQL, ops VM, and a Flask RBAC honeypot app. Demonstrates infrastructure, networking, security boundaries, K8s hosting, validation, and documentation.

AWS & Serverless Architecture

- [aws-ss0](#) — Terraform module for AWS IAM Identity Center / SSO: users, groups, accounts, and permission sets at organization scale.
- [aws-org-health](#) — Cross-account AWS Organization Health monitoring: Lambda + EventBridge Scheduler + S3 state + KMS + Secrets Manager + Slack alerts.

- ▶ [aws-dynamic-widget-cdn](#) — Serverless dynamic widget CDN: CloudFront + Lambda@Edge with caching, CORS handling, Route53, ACM — pattern that cut prod costs 90%.
- ▶ [aws-release-notifications-system](#) — Event-driven release notifier: EventBridge + SQS + Lambda + DynamoDB (GSI) + Slack + email.

Kubernetes & Platform Engineering

- ▶ [hp-microservices](#) — Microservices on Kubernetes: Flask + MySQL + SQLite PVC, Secrets, Ingress, network isolation, and HPA autoscaling.
- ▶ [kube-chaos](#) — Troubleshooting guide & lab covering real failures: CrashLoopBackOff, ImagePullBackOff, scheduling, and NetworkPolicy issues — with runbooks.
- ▶ [kind-java](#) — Multi-node Kind cluster with Java backend, Nginx frontend, Traefik Gateway API, Prometheus, and Grafana.
- ▶ [flask-rbac-tictactoe-k8s](#) — Flask RBAC app on Kubernetes with PostgreSQL, Prometheus metrics, health probes, and honeypot login monitoring.

CI/CD

- ▶ [nginx-minikube](#) — GitHub Actions pipeline: builds Docker images, pushes to Minikube registry, updates Helm values, deploys Nginx, verifies workload.

Additional Sandboxes

- ▶ [localstack_apigw](#) — Single-session Terraform AWS Lambda + API Gateway on LocalStack.
- ▶ [mysql_docker_python](#) — Dockerized MySQL with three Python apps - networking, persistence, and inter-container communication.

EXPERIENCE

System Architect / DevOps / Infrastructure Engineer

July 2025 — Present

Danjo Consulting — Client engagements (Freelance)

- ▶ Designed and automated on-prem **VMware vSphere / ESXi** environments with reusable **Terraform** modules for datacenter, networking, and VM provisioning.
- ▶ Built segmented architectures with separated **Kubernetes**, database and firewall/router zones using least-privilege routing.
- ▶ Design Deliver DevOps, platform and infrastructure engineering for external client companies through Danjo, covering on-prem/private cloud, Kubernetes, AWS automation, CI/CD, networking, security and operational troubleshooting.
- ▶ Containerized apps with **Docker + Gunicorn** and hosted on **Kubernetes**; built **GitHub Actions** CI/CD that builds images, deploys to K8s, verifies workloads, and collects logs on failure.
- ▶ Implemented observability with **Prometheus + Grafana**, health endpoints, and structured logging; wrote runbooks for CrashLoopBackOff, ImagePullBackOff, scheduling, and NetworkPolicy debugging.
- ▶ Built security-oriented platform features: RBAC, real-vs-honeypot login flows, audit logging, K8s Secrets, NetworkPolicies.

Cloud Architect / DevOps Engineer / SRE

July 2024 — March 2025

AB Tasty — Paris

- ▶ Legacy migration: replaced costly **EKS**-based dynamic server with a serverless **CloudFront + Lambda@Edge** solution — **cut operational cost ~90% and improved load time ~60%**; all infrastructure as custom **Terraform** modules.
- ▶ Designed real-time prod→non-prod data replication with **Lambda + SQS + DynamoDB Streams**, handling binary decoding and dynamic table mappings across regions.
- ▶ Designed and built an **AWS Organization Health monitoring & alerting system** (Delegated Health Admin + Lambda + EventBridge Scheduler + S3 + Slack) for cross-account incident visibility.
- ▶ Architected and implemented an event-driven release notification system (**EventBridge + SQS + Lambda + DynamoDB GSI + Slack + Mandrill**) triggered by GitLab CI.

- Led the company-wide **AWS Organization & SSO** rollout: custom Terraform **AWS SSO module** for identity stores, users, groups, permission sets, account assignments + bash migration of all legacy accounts.
- FinOps: cut monthly AWS spend ~30% via billing reviews and right-sizing; led org-wide resource version upgrades; performed code reviews and authored module documentation.
- Built and maintained shared Terraform modules, modules for organization-wide use.
- reviewed code, **created comprehensive documentation and usage tutorials**.
- **Investigated and resolved legacy bugs\issues**, implementing optimized solutions that enhanced efficiency and saved approximately 3 work hours per day for all team members.

DevOps Engineer

April 2023 — June 2024

Danjo Consulting (Freelance)

- GCP data migration; NetSuite development and automation.

DevOps Engineer / DevSecOps

April 2022 — April 2023

Checkmarx — Application Security Platform (AST DevOps team)

- Provisioned **AWS** (EC2, S3, RDS, Lambda, VPC) and **Kubernetes** with **Terraform**; designed IAM policies and roles.
- Implemented **DevSecOps** practices controls across pipelines, including encryption, authentication, IAM design and vulnerability assessment processes.
- Built **CI/CD pipelines** using CircleCI, GitHub Actions, JFrog, Helm and Kubernetes, including secure automated updates to AWS resources and cluster components.
- Built backoffice CI from scratch with **Keycloak SSO**; wrote **CircleCI** pipelines with JFrog + Helm to update AWS and K8s clusters securely on every run.
- Built a custom **Prometheus** port-based Unix **monitoring** system with PromQL dashboards and am-executor **auto-remediation**.
- Supported R&D on CI in Linux; managed multi-environment deployments and Helm releases.

Automation Developer

March 2021 — October 2021

Dot Compliance — Industry QMS

- Java automation scripts from scratch; Salesforce platform testing.

Automation Developer / Junior DevOps

2017 — 2019

IDF — Cyber Unit (Mazpen, DevOps Department)

- Built Java automation infrastructure from scratch for ELK using **Java** and LeanFT; API tests with Postman.
- Automated CI/CD on Git with **Jenkins + Docker**; orchestrated containers with **Kubernetes**.
- Supported top-secret projects (Classification level 2); trained technical and non-technical staff on security and DevOps concepts.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science — Ono Academic College · 2019 – 2023

Applied Economics of Blockchains — Università di Macerata, Italy · 2022

ISTQB Certification — IITC College · 2018

QA & Automation — BASMACH (IDF School for Computer Professions) · 2017
